## RECREANIZATION OF RUMANIAN PERIODICALS ON FORESTRY

Because it was found that coverage was too diffuse in the periodical of the Ministry of Forestry and Timber, Paper, and Cellulose Industries, two periodicals were created to correspond to the two ministries: Ministry of Forest Culture, and Ministry of Timber, Paper, and Cellulose Industries. The division into two periodicals is effective as of January 1952.

Revista Padurilor becomes the organ of the Ministry of Forest Culture. It will deal with the creation, maintenance, and management of forests, the improvement of inferior land areas, the protection and replanting of forests, and the catting of timber. Revists Industries Leanului, Colulogei si Eartiel will cover the activities of t. Ministry of Timber, Paper, and Cellulose Industries. It will deal with the processing of wood products, transport, paper, and cellulose.

Engineers and forest technicians are called upon to contribute their scientific and technical knowledge to the clarification and solution of problems, in order to help the Revists Fadurilor fulfill its mission.

Formerly, there was only one ministry in charge of all phases of forestry and the timber, wood-processing, paper, and cellulose indus les. This was the Ministry of Forestry, and Timber, Paper, and Collulose Industries. Its official publication was the Revista Padurilor, Industriei Lemmului, Eartiei si Colubest. However, it was found that the Ministry and its periodical covered to: broad a field of activity. Engineers and technicians in every sector of the economy are seeking to keep up with progress in their fields to improve their knowledge and to learn of new technical processes. They are striving to raise the quality of their products, to increase labor productivity, and to reduce the cost of production. Technical periodicals of the ASIT (Scientific Association of Engineers and Technicians) have reported on all new developments. They cover all revelent problems which arise, discuss duties under the Five-Year Plan, and pave the way for future developments. Such periodicals seek to limit themselves to their own specialties.
